## Public Summary

This document – as presented below – represents the final version (M36) of the AENEAS Data Management Plan. In v1.0, the revision of D8.1 was foreseen in M18 and M36. The scope of the first version was to present an overall approach towards the processing of the data produced within the framework of the project. The scope of the second version was to refine this initial approach by incorporating updated data types, and preliminary procedures based on the data actually generated during the first half of the project.

The scope of this third and final version is to consolidate and formalise the data management practices implemented throughout the full project lifetime. It provides a comprehensive overview of the datasets generated, collected, and processed within AENEAS, and documents the final decisions regarding data storage, access, sharing, preservation, and long-term stewardship. Furthermore, it reports on the extent to which FAIR data principles (Findable, Accessible, Interoperable and Reusable) have been applied, and clarifies the responsibilities, tools, and infrastructures that have supported the sustainable management and potential reuse of AENEAS data beyond the end of the project
